Oracle EBS to Cloud Transformation Accelerator - Zoom2Cloud

Datasheet

ZOOM2CLOUD

Accelerate your transition with pre-configured business processes and cutting-edge automation.

The Business Challenge

As businesses migrate from Oracle E-Business Suite (EBS) to Oracle Fusion Applications they face significant challenges. The complexity of system architecture, functionality gaps, user experience shifts, and potential operational disruptions can increase the total cost of ownership (TCO) and reduce user satisfaction. Businesses also struggle with maintaining data integrity, handling custom integrations, and ensuring smooth transitions across critical processes without disrupting ongoing operations.

Data migration complexity, reconfiguration of business processes, and end-to-end testing add layers of difficulty. Without the right tools and expertise, these migrations can lead to delays, errors, and increased operational risk.

The Solution

Jade Global's Zoom2Cloud transformation accelerator simplifies and expedites the transition from EBS to Oracle Fusion. With automated tools and tailored solutions, Zoom2Cloud ensures seamless process harmonization, robust data migration, streamlined configurations and end-to-end testing. It minimizes downtime, optimizes system reliability, and enhances business process mapping for Oracle Cloud.

The Cloud Data Migrator in it automates the entire data migration process—from extraction to reconciliation—while ensuring data accuracy. Automated configuration management reduces manual errors, and JadeBot's test automation accelerates quality assurance, providing detailed reporting and robust performance testing across all business scenarios.

Benefits to Your Business

- Enhanced business process mapping and optimization
- Seamless and secure data migration
- Streamlined, error-free configuration deployment
- Comprehensive application quality assurance through automation

Zoom2Cloud: Key Differentiators

Business Process Mapping: Zoom2Cloud brings advanced Fusion Process Enhancements to your Oracle Cloud. This ensures optimized configurations for a seamless data transition, preserving data integrity, minimizing downtime, and enhancing system reliability and user satisfaction post-migration.

Oracle Cloud Data Migrator: This accelerator offers comprehensive data transformation capabilities, automating processes from data extraction to reconciliation. This feature ensures seamless integration of data into Oracle Cloud applications while maintaining data integrity.

Configuration: Configsnapshot facilitates faster, error-free deployments and simplifies the management and comparison of configurations across environments. This reduces manual efforts and ensures compliant, documented system changes.

Test Automation: JadeBot brings advanced automation to testing processes. It efficiently manages test cases and bug tracking, reduces implementation times and labor costs, and delivers detailed reporting for improved decision-making.
